

ARCADEmy

powered by Shift Education

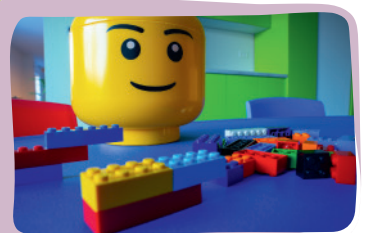

kids club

For children aged 4-14 years old

A newly built space with meaning and aesthetic harmony. A playful learning space that inspires creativity, imagination and innovation. A holistic learning experience, connected to the landscape and cultural heritage of Santorini.

Children aged 4-14 years old will have the opportunity to participate in group activities that have been especially designed to take full advantage of the equipment and the facilities. Besides the core Kids Club activity schedule, the children will have the option to book exciting robotics sessions, held in the dedicated robotics lab by using LEGO® Education robotics platforms.

Our kids club operates under the guidance of Shift Education, an educational organization that provides educational services to children, following the STEAM educational philosophy, but also aims at developing soft skills.
